SOLUTIONS BRIEF

The Modern Data Catalog For Insurance

Insurance is one of the most data-driven — and data-reliant — industries in the world. It's at the core of every decision from underwriting, to rating, pricing, claims handling, and risk assessment. And it's also why savvy insurance companies are modernizing their data practices, migrating to the cloud, and developing innovative data products.

With fierce competition and increasing economic pressure, it's critical for insurers to accelerate these data initiatives while reducing costs and minimizing risk. That's where data.world comes in. data.world is a cloud-native data catalog that powers data discovery, governance, cloud data migration, and data product delivery for insurance and healthcare organizations.

The platform combines an intuitive user experience with a powerful knowledge graph and connects to modern and legacy data sources, so all your information - from spreadsheets to claims docs - is organized, findable, accessible, and usable.

Data Discovery

Empower people with self-service search and discovery. Explore metadata, analysis, and data products in seconds, not weeks.

Agile Data Governance

Build a more inclusive and participatory data culture by providing safe, consistent, and collaborative data management.

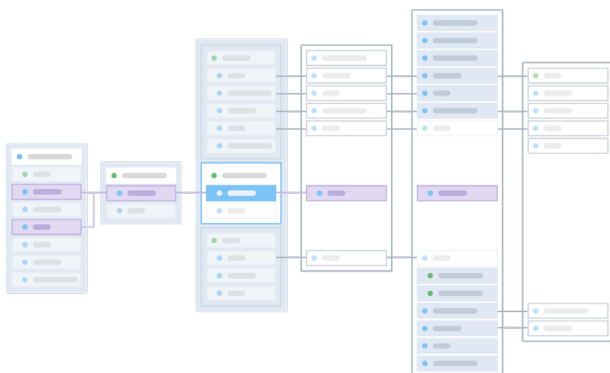

Cloud Data Migration

Document your on-premises data to create a prioritized backlog of knowledge that will be migrated to support your cloud data use cases.

Track and trust your data

If you can't trust your data and understand its provenance, how can you accurately predict risk or mitigate fraud? data.world gives you a high degree of confidence in your data by providing profiling, sampling, and column-level lineage out of the box. Quickly view the history of data transforms and usage and spot and troubleshoot problems with Eureka Explorer™.

Discover and retain knowledge

Don't keep your underwriters, agents, and data people waiting. data.world provides self-service discovery of data, analysis, metadata, and more. Powered by Eureka Answers™, data.world provides search results in full context and delivers recommended data and analysis based on the people, datasets, and search results that your users are connected to.

beazley

“Getting all of this information in a common place means a significant improvement in the productivity of our data scientists who are always calling for new types of data that they can use in their models. It used to take months to get that information. Now, they can go to data.world and get this in minutes.”

Former CDO, Verisk
