

The data catalog for your modern data stack

Our **cloud-native** platform combines an intuitive user experience with a powerful knowledge graph to deliver enhanced data **discovery**, **governance**, and **actionable insights**.

"We now do in half a day what we couldn't do in six months."

– Michael Murray, former president, Choreograph

Powered by knowledge graph

Search like you're on Google with a data catalog that understands relationships between data assets, business concepts and people.

Adopted by millions

The most widely deployed data catalog drives data literacy with experiences that encourage exploration, collaboration, and re-use.

Fully managed SaaS

Focus on important data tasks and anywhere, anytime access. No lengthy installs, migrations, upgrades or downtime.

Open and flexible

Connect to any solution in your DataOps ecosystem, including data warehousing, observability, lineage, BI and more.

Last-mile governance

Clear the final hurdle to data supply chain efficiency with a catalog that supports both virtualized and federated access to data.

Business-first automation

No "black-boxes" or flashy AI tricks. Automate what matters most to your team to drive efficiency in data work.

"For organizations looking to drive data analysis, collaboration, and discovery through data governance programs or to mature their capabilities, data.world is a good choice."

Forrester Wave™: Data Governance Solutions, Q3 2021

data.world is your front office for data and analytics

Information radiator

Automatically aggregate mission-critical metadata and present it to your data and analytics community in quickly consumable fashion.

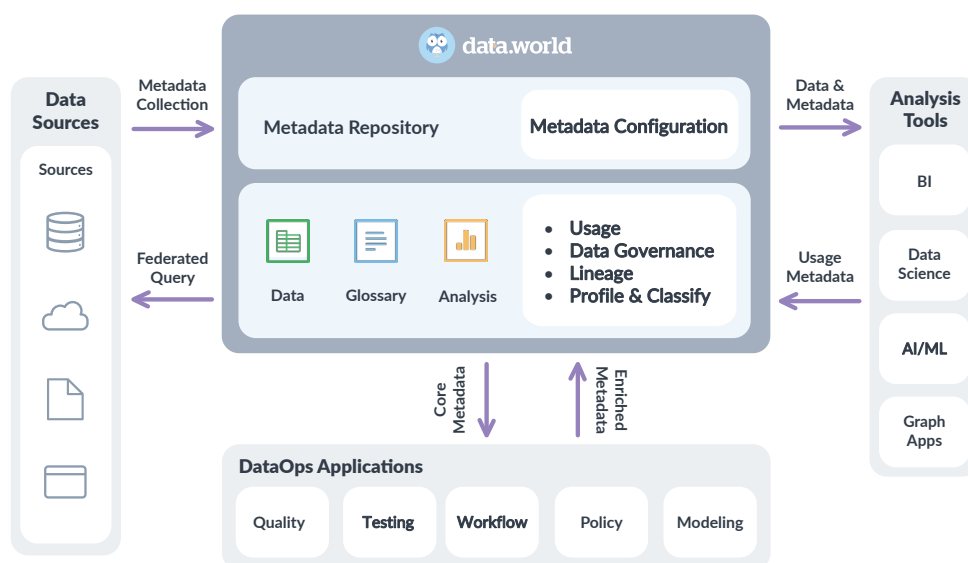

Collaboration hub

Bring data producers and consumers together in real-time to overcome knowledge gaps that stand in the way of reproducible, trustworthy analytics.

Open ecosystem

Easily incorporate new data and analysis tools into your workflow so new silos don't develop with our open and extensible platform.

The DataOps Stack

DataOps productivity

Quickly and easily connect to and catalog data from any source including on-prem and cloud databases, business intelligence dashboards and reports, filesystems, shared drives, SaaS tools, APIs, and more.

- Edit related assets in bulk for quick, efficient updates
- Identify the highest and lowest-demand data resources
- Perform detailed data troubleshooting and impact analysis with high-level and technical lineage

Agile data governance

Open up traditionally restricted governance functions once reserved for a core team of stewards. Agile data governance is a modern, iterative approach that captures your entire team's expertise and knowledge and enhances collaboration between data producers and data consumers.

- Manage crowdsourced governance and data access requests
- Apply changes and permissions to assets in bulk
- Empower everyone – regardless of role – to collaborate on data
